

## **P307. Antioxidant - regenerative therapy - a new anti-aging concept of women in peri and postmenopausal age**

*M R Orazov (RU) [1]*

The question of how to extend a full human life for many generations to deflect and reflect all the facets of science and philosophy, including even shadow them. The leaders of major countries and strong regions were forced to make

difficult decisions about how to achieve universal desires: to live long and be free and healthy. Sorry, we can't live forever, achieve equilibrium between the desire for a long, healthy life and understanding the inevitable decay of old age, is often difficult. Paradigm of quality and healthy aging requires a detailed understanding of how cells and tissues degrade over time and the points at which you can hope to successfully intervene in the aging process. The aim of the study was to evaluate the effectiveness antioxidant-regenerative complex therapy "FAM-vital-" to improve the quality of life of women in peri and postmenopause period of life. The main achievement of recent decades

is conceptual understanding of aging as a fatally programmed

the process of deterioration and aging of the organism, but as a complex process of adaptation with complex regulatory changes, search and the impact of which

can prevent the development of pathological conditions, contributing to aging, to improve the quality of women's health, peri and postmenopausal age.
